
Digital Parking Permit System
Final Exam Practical — SER 216
Student Name: Khondamir Tuychiev
Date: May 4, 2026

Task 1 - Requirements

Functional Requirements:

1. Students and staff can register vehicles with license plate and personal details
2. Users can request a parking permit and select a preferred zone
3. The system checks zone availability and approves or rejects permit requests
4. Security staff can verify permits and log parking violations

Non-Functional Requirements:

1. The system must respond to permit verification requests within 2 seconds
 2. User data must be encrypted and accessible only to authorized personnel

Task 4: Defect Analysis

Item	Answer
Defect Category	Logic / Data Error
Severity	High — blocks core security function
Priority	High — must be fixed immediately
Possible Root Cause	Permit expiry date is read incorrectly (timezone mismatch, date format bug, or wrong field queried from database)
Regression Test	After fix, re-verify that a known valid permit displays "Active" status across all devices and time zones

Task 5 - [GitHub screenshots to be added]

The image displays two screenshots. The top screenshot shows a 'Test Case Table' in a spreadsheet application. The table has columns for Test ID, Feature, Input / Data, Expected Result, and Test Type. The bottom screenshot shows a GitHub repository page for 'SER216_Final_Project_Khondamir_Tuychiev', specifically the 'Commits' section. It lists several commits, including a merge pull request and several feature additions.

Test ID	Feature	Input / Data	Expected Result	Test Type
TC-61	Vehicle Registration	Valid student ID + license plate	Vehicle registered successfully	System
TC-62	Permit Approval	Valid zone selected, no conflicts	Permit issued and displayed	System
TC-63	Permit Request	Student submits permit form	System confirms permit matches university policy	Acceptance
TC-64	Zone Availability	Staff checks parking zones	Available zones shown clearly to user	Acceptance
TC-65	Vehicle Registration (re-run)	Previously tested valid data	System still registers without errors	Regression
TC-66	Permit Approval (re-run)	Previously approved permit scenario	Permit still issued correctly after system update	Regression

Commits

- Merge pull request #1 from Khondamir26/feature/test-plan (Verified) 6d13e0b
- Add defect analysis 090352
- Add test case table d61324f
- Add workflow diagram b4a46f
- Add project report structure 89126a
